AT A GLANCE

FinTech & Compliance | Product & Experimentation | People Leadership | AI Builder

Current scope: Lead analytics across StubHub’s fintech domains (tax, partnerships, ledger); team of up to 8 analysts

Trajectory: Financial Data Specialist to Analytics Manager in 3 years; built two analytics teams from scratch

Signature results: \$70M in financial impact across 15+ jurisdictions | company’s first VAT-compliant e-invoicing | \$1M+ annual savings | jurisdiction testing cut from up to a week to 15 minutes

Core expertise: Indirect tax & VAT compliance | SOX controls | NetSuite (ERP) | month-end close & audit | SQL | Python | dbt | Snowflake | A/B testing

How I work: Prototype ideas with AI to make designs tangible for stakeholders; build personal AI and data products, from SEC anomaly detection to global tax obligation intelligence

WORK EXPERIENCE

StubHub	Feb 2022 – Present
<i>Global online marketplace with fintech flows across payments, refunds, settlements, and tax</i>	<i>New York, NY</i>
Analytics Manager, FinTech	Apr 2026 – Present
Analytics Manager, Tax & Partnerships	Apr 2025 – Apr 2026
Finance Technology Data Analyst III	Aug 2024 – Apr 2025
Finance Technology Data Analyst II	Feb 2023 – Aug 2024
Finance Technology Data Analyst I	Aug 2022 – Feb 2023
Financial Data Specialist	Feb 2022 – Aug 2022

People & Organizational Leadership

- Built and scaled two fintech analytics teams from the ground up, tax and partnerships; now lead analytics across tax, partnerships, and ledger, managing a team of up to 8 analysts through a company-wide reorganization
- Developed a leadership bench within a predominantly senior team: coached 3 analysts into mentoring junior analysts, promoted 3 analysts, and prepared 3 analysts for lateral moves into more technical engineering teams
- Hired for my team and the broader fintech organization through a collaborative, team-involved process, conducting a high volume of interviews across roles

Product & Strategy

- Led tax compliance expansion across 15+ jurisdictions, driving \$70M in financial impact through scalable, product-led platform improvements
- Led the foundations of StubHub's new tax microservice, launching e-invoicing for the first time in company history and enabling tax collection in a previously unsupported market, the largest single driver (\$50M) of that impact
- Served as embedded product manager owning multi-quarter strategic roadmaps and quarterly KR's, coordinating execution across analytics, engineering, and finance to drive regulated platform changes
- Ran A/B tests on user-facing tax experiences, including checkout flow, tax display, e-invoicing, and tax ID requirements, and used A/A tests to validate platform migrations, ensuring measurable impact and parity before launch
- Build working prototypes with AI tools to turn product ideas into tangible designs, accelerating alignment with stakeholders
- Led platform modernization, including a tax engine introduction and an automated refactor of the financial partnerships data model, defining requirements, sequencing, dependencies, and risk controls

Analytics & Technical Leadership

- Conceived and designed an automated tax UAT tool, authoring the technical design and guiding a direct report through build and iteration; cut end-to-end testing of a new jurisdiction or tax change from up to a week to ~15 minutes across tens of thousands of transactions

- Cut manual operational workload by nearly 50% by leading the implementation of modern, scalable data models for financial reporting, consolidating 40+ individual reports into 5
- Spearheaded automation of manual and consultant-owned workflows, eliminating third-party dependencies, strengthening internal controls, and delivering \$1M+ in annual cost savings
- Designed SOX-aligned governance and change-management frameworks for tax-critical systems, and ensured accuracy of tax accounts and journal entries in NetSuite for month-end close and audits
- Partnered with analytics engineering on dbt and Airflow to define data governance, quality standards, and delivery expectations

Freelance Data & Design Contracts

Sept 2020 – Feb 2022

Beacon Hill Staffing Agency / Independent Clients

New York, NY

- Delivered short-term data, operations, and design engagements while completing a deliberate pivot to data analytics and technology operations

Manufacturing Planner

Nov 2015 – Sept 2020

Scholastic, Inc. (Global publishing supporting large-scale print production)

New York, NY

- Analyzed purchasing and manufacturing data to drive \$900K+ in cost savings
- Maintained internal manufacturing databases supporting production of 1M+ books
- Investigated and reconciled data discrepancies across supply chain partners

SELECTED PROJECTS – see more at stephaniegracefarah.github.io/portfolio-website

fin insight: AI-Powered Financial Data Quality Monitor

- Built an end-to-end pipeline from SEC EDGAR ingestion through dbt transformations and custom data quality tests to statistical and ML anomaly detection, stored in DuckDB with plain-language explanations via the Claude API and an interactive Streamlit front end

taxsight: AI-Powered Global Tax Obligation Intelligence

- Building a dbt-modeled dataset of tax obligations for digital platforms across four regimes (EU DAC7 and UK/Canada platform reporting, digital services taxes, US marketplace facilitator rules, and VAT/GST in 34 countries), with a two-mode Claude extraction layer that parses authoritative government sources or researches fragmented ones with cited sources and confidence flags

FlexFund: Cash-Flow App for People Who Hate Budgets

- Designed and built a budgeting app that answers one question: will I have enough to cover my bills before my next paycheck? Users enter recurring bills and income, and the app does the rest. Built with Supabase (PostgreSQL) and deployed on Vercel

Personal Health Analytics Platform

- Built a data pipeline and custom dashboard for Oura ring data, integrating the Oura API with automated daily ingestion via GitHub Actions, storage in Supabase (PostgreSQL), and AI-generated insights with correlation analysis, deployed on Vercel

EDUCATION, SKILLS, TOOLS, & PLATFORMS

St. Cloud State University, B.A. Anthropology

St. Cloud, MN

Google UX Design Course (Coursera)

Finance & Compliance: audit readiness, e-invoicing, indirect tax & VAT, journal entries, month-end close, NetSuite (ERP), SOX controls

Data & Analytics: Advanced Excel, dbt, DuckDB, Hex, Microsoft SQL Server, Python, Snowflake, Streamlit, Supabase (PostgreSQL), Tableau

Platform & Engineering: A/B Testing, Airflow, Azure DevOps, Git, Microservices, Vercel

Product & Operations: Airtable, Atlassian, Confluence, Figma, Fonoa, Jira, Notion, Slack, UAT, Zoom

AI & Automation: AI-assisted deep research and prototyping, ChatGPT, Claude API, prompt engineering, workflow automation
